

Product Specification Sheet

Mossrock™ MR12

Product Description:

Mossrock MR12 is a recycled timber mulch made from both hard wood and soft wood timber, then screened to a uniform size.

Product Size:

Mossrock MR12 is a screened product, all particles have a diameter between 6mm and 12mm.

The length of particles vary from 10mm to 50mm

Materials Used:

Mossrock MR12 is made from both hardwood and softwood recycled timbers such as:

- Pallets
- Packing crates
- Old fences
- Construction and demolition timbers.

Mossrock **do not** accept timbers such as:

- CCA treated pine
- Laminated timber
- Craftwood
- Masonite
- Painted timber

Manufacturing Process:

Recycled timber is accepted at our Cooper Street site where it is manually checked for contaminants. The timber is fed into a grinder to produce a coarse product, this product then passes under a high powered magnet to remove a high percentage of ferrous material. The coarse product is then fed into a secondary grinder to produce a finer product, this product is then passed over another magnet to remove any ferrous material missed by the first magnet. This product is then fed into a screen which sorts the product by size into the final MR12 product.
