

Product Specification Sheet

Mossrock™ Softfall (Playground Undersurface Mulch)

Product Description:

Mossrock™ Softfall is a playground undersurface mulch made from A-Grade virgin pine wood in a chip form.

Product Size:

Mossrock™ Softfall is a predominately square chip product, particles have a width and length between 2mm and 40mm.

The thickness of particles vary from 2mm to 15mm

Materials Used:

Mossrock™ Softfall is made from A-Grade virgin pine in a chip form sourced from pine sawmills throughout Victoria and New South Wales.

Manufacturing Process:

A-Grade virgin pine chip is delivered to our site below where it is fed into a hammer mill tub grinder to produce the final product. The product also passes under a high powered magnet to remove any ferrous materials.

This product is then tested to Australian Standards AS4422:2016 and AS4685.0.2017 by Acoustoscan under laboratory conditions as required by both standards. These standards test Mossrock Softfall for use in playgrounds to standard fall heights.

A certificate of this test can be given upon request.
